7. Graphic Card 10. Fan Controller 11. Front Fan Controller 12. Fan installation 13. Radiator installation 8. Graphic Card (Vertical) 9. 3.5 HDD,2.5 SSD 14. Max Water Cooling Compatibility (the total thickness of fan and rad) 120mm Fan : 240mm Radiator: Low – Fan working in Low RPM(60~70% of Max RPM) Stop - Fan Power OFF PWM in – Connect to CPU FAN socket on MB (Must be connected under PWM mode) 140mm Fan: Pump/Reservior:

B PWM out - Connect to CPU Cooler Fan or another 4pin PWM Fan (Must be connected under

• PWM Mode: The fan speed control is performed by the CPU fan on the motherboard.

"Use the correct mode to ensure functionality"

PWM Mode ONLY when all fans connected to C are 4 pin PWM fans

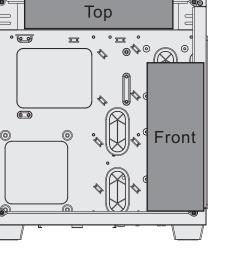

● Fan Socket - Connect to Fans you want to to control (3 or 4 pin fan).

● Control in – Connect to Front Fan Controller.

Fan Mode Switch -

Power in – Connect to SATA Connector of Power Supply.

- 3pin or 4pin fans can be connected to C.
- CPU FAN socket can be replaced with other 4pin PWM fan socket on MB, please refer to the MB user manual.
- The fan controller system is compatible with most fans in the market but effect of RPM
- You can read RPM of fans connected to C only when fans connected to B & C are exactly the same model & brand.

Top: Max 55mm thickness for 280 water cooling Max 65mm thickness for 240 water cooling

Front: Max 100mm thickness
